

Scheme of work – Cambridge IGCSE® Biology (0610)

Unit 2: Animal nutrition

Recommended prior knowledge

Students can come into this unit with very little biological knowledge. However, they do need to understand some basic chemistry such as atoms, elements and compounds. An understanding of bonding and the role of ions in simple chemical reactions is an advantage.

Context

The molecules that make up the bodies of living things are introduced here, and will be referred to in all of the subsequent units.

Outline

This unit considers the molecules from which living organisms are made, and then looks in detail at how animals acquire the materials that they need to form the structure of their bodies, and also to supply energy. The way in which small molecules can be used to make larger ones is briefly considered, before thinking about how such large molecules need to be broken down again before they can be absorbed through the wall of the alimentary canal. The functions of the main digestive enzymes are considered, linking back to the work on enzymes in Unit 1. The use of food to supply energy will be covered in more detail in Unit 4, and the functions of the liver in glucose and amino acid metabolism, touched on very briefly here, will be treated in more depth in Unit 5.

(Please note: **(S)** in **bold** denotes material in the Supplement (Extended syllabus) only)

Syllabus ref	Learning objectives	Suggested teaching activities	Learning resources
II 6	<p>2.1 Nutrition</p> <ul style="list-style-type: none">Define <i>nutrition</i> as taking in of nutrients which are organic substances and mineral ions, containing raw materials or energy for growth and tissue repair, absorbing and assimilating them	<p>Discuss the need for materials for growth and repair and for energy to maintain their activities such as movement and sensitivity. A simple definition of an organic substance is one whose molecules contain carbon and hydrogen. Cross link with plant nutrition in Unit 3.1.</p>	<p><i>Biology for IGCSE</i>, Williams et al. 2009. p44–45</p> <p>Unit revision: www.s-cool.co.uk/gcse/biology/nutrition/revise-it/nutrition</p> <p>Unit revision: www.lgfl.skool.co.uk/content/keystage4/biology/pc/lessons/uk_ks4_digestion/h-frame-ie.htm</p>

Syllabus ref	Learning objectives	Suggested teaching activities	Learning resources
II 6.1	<p>2.2 Nutrients</p> <ul style="list-style-type: none"> List the chemical elements which make up: <ul style="list-style-type: none"> carbohydrates fats proteins Describe the synthesis of large molecules from smaller basic units: <ul style="list-style-type: none"> simple sugars to starch and glycogen amino acids to proteins fatty acids and glycerol to fats and oils 	<p>Ensure that students have some understanding of the terms: element, atom, molecule.</p> <p>Beads that string together, or simple chemical modelling kits, can be used to illustrate the idea of small molecules joining together to make larger ones.</p> <p>A table or flash cards can identify the classes of foods. Headings: class of food; source of food; uses of food in body;</p> <p>Once Unit 1.11 is completed, the enzymes and products of digestion could also be added to the summary table.</p> <p>Students should understand that starch is the carbohydrate stored only in plants. Animals store carbohydrate as glycogen.</p>	<p>For detail on carbohydrates, fats and proteins: www.nutrition.gov/nal_display/index.php?info_center=11&tax_level=2&tax_subject=388&topic_id=1665&placement_default=0</p> <p>PowerPoint presentation – The Chemicals of Living Things: www.biology-resources.com/biology-CD.html</p>
II 6.1	<ul style="list-style-type: none"> Describe tests for: <ul style="list-style-type: none"> starch (iodine solution) reducing sugars (Benedict's solution) protein (biuret test) fats (ethanol) List the principal sources of, and describe the importance of: <ul style="list-style-type: none"> carbohydrates fats proteins vitamins (C and D only) mineral salts (calcium and iron only), fibre (roughage) water Describe the deficiency symptoms for: <ul style="list-style-type: none"> vitamins (C and D only) mineral salts (calcium and iron only) 	<p>Students should have the opportunity to carry out each of these tests on a range of foods. It is a good practical lab in which students should realize the importance of safety when using a water bath.</p> <p>As an extension exercise, students can be given a solution containing a mixture of unknowns such as a reducing sugar and a protein.</p> <p>This can also give useful practice in recording qualitative results in a clearly presented results chart. Conclusions can also be written from the observed results.</p> <p>Food tests also enhance the students' understanding of the main classes of foods.</p> <p>The information on multivitamin tablet packets lists the vitamin contents and their requirements in the human body.</p> <p>Extension – students could carry out research into food composition using the site Nutrition.gov</p>	<p><i>Biology for IGCSE</i>, Williams et al. 2009. p46–47</p> <p>Food tests: www.biology-resources.com/biology-experiments2.html</p> <p>Revision – Food tests: lgfl.skool.co.uk/content/keystage4/biology/pc/modules/digestion/food_tests/index.html</p> <p>Nutrition.gov: What's in food: www.nutrition.gov/nal_display/index.php?info_center=11&tax_level=1&tax_subject=388</p>

			alnutrition/index.html
II 6.3.2	<p>2.4 Food supply</p> <ul style="list-style-type: none"> Discuss the ways in which the use of modern technology has resulted in increased food production to include: <ul style="list-style-type: none"> modern agriculture machinery chemical fertilisers pesticides herbicides artificial selection 	<p>Material to illustrate this topic, and to form the basis of discussion, can be collected from newspaper and television reports. Students may like to consider whether new technologies, such as the development of genetically modified varieties of crops, are likely to improve the situation or exacerbate it.</p> <p>Extension – students could consider “food miles”.</p> <p>Student progress could be assessed using: May/June 2009 Paper 0610/02 question 9</p>	<p>Science Across the World – How Plants Grow: www.nationalstemcentre.org.uk/eli-brary/resource/1725/how-plants-grow</p> <p>Food miles: www.saps.org.uk/secondary/teaching-resources/138--how-science-works-food-miles-and-changing-levels-of-co2 Links with Unit 10 – Human influences on the environment</p>
II 6.3.2 (S)	<p>2.4</p> <ul style="list-style-type: none"> Discuss the problems of world food supplies Discuss the problems which contribute to famine: <ul style="list-style-type: none"> unequal distribution of food drought floodings increasing population 	<p>Drought and flooding can be linked to Unit 10.1.</p> <p>Student progress could be assessed using: May/June 2010 Paper 0610/31 question 6 Oct/Nov 2008 Paper 0610/31 question 2</p>	<p>Technology to Feed the World: www.nationalacademies.org/webextra/crops/ A discussion of the problems of feeding the world's growing population, with excellent links to many other websites.</p>
II 6.3.3	<p>2.5 Human alimentary canal</p> <ul style="list-style-type: none"> Define <i>ingestion</i> as taking substances e.g. food and drink into the body through the mouth Define <i>egestion</i> as passing out of food that has not been digested as faeces, through the anus Identify the main regions of the alimentary canal and associated organs including: <ul style="list-style-type: none"> mouth salivary glands oesophagus stomach 	<p>Students often do not understand that the alimentary canal is a long tube - albeit a coiled one - through which food passes. A long flexible rubber tube can demonstrate the idea. A schematic diagram on A3 paper can clarify the main events that take place from ingestion by the mouth to egestion from the anus. Arrows in different colours can show which enzymes are involved along the canal. Students should understand that food cannot be considered to have entered the body until it crosses the wall of the canal.</p> <p>The need for digestion to take place before absorption occurs is shown by using Visking tubing (to represent the alimentary</p>	<p><i>Biology for IGCSE</i>, Williams et al. Nelson Thornes 2009 p78–83</p> <p>Digestion: www.abpischools.org.uk/res/coRe-sourceImport/resources04/digestion/index.cfm</p>

Syllabus ref	Learning objectives	Suggested teaching activities	Learning resources
	<ul style="list-style-type: none"> – small intestine: duodenum and ileum – pancreas – liver – gall bladder – large intestine: colon and rectum – anus • Describe the functions of the regions of the alimentary canal listed above, in relation to: <ul style="list-style-type: none"> – ingestion – digestion – absorption – assimilation – egestion of food <p>Cross reference 6.3.4 to 6.3.7 inclusive.</p>	<p>canal) containing a mixture of glucose, starch and water. The visking tubing is placed in a beaker or a large test tube of water (to represent the blood), and left for several hours to allow the glucose to diffuse across the tubing. The contents of the tubing and of the beaker can be tested for starch and for glucose.</p> <p>Extension – the importance of active uptake could be considered. This is particularly important for students studying Supplement.</p>	
II 6.3.4	<p>2.6 Mechanical and physical digestion</p> <ul style="list-style-type: none"> • Define digestion as the breakdown of large, insoluble food molecules into small, water soluble molecules using mechanical and chemical processes • Identify the types of human teeth and describe their structure and functions • State the causes of dental decay and describe the proper care of teeth • Describe the process of chewing • Describe the role of longitudinal and circular muscles in peristalsis <p>Outline the role of bile in emulsifying fats, to increase the surface area for the action of enzymes</p>	<p>Student progress could be assessed using: May/June 2010 Paper 0610/21 question 7</p> <p>Extension – different types of teeth could be studied and related to different diets.</p>	<p>Revision: lgfl.skool.co.uk/content/keystage4/biology/pc/modules/digestion/digestion_part_1/index.html</p> <p>Video clips – Digestion: www.bbc.co.uk/learningzone/clips/the-digestive-system/4180.html</p> <p>www.bbc.co.uk/learningzone/clips/the-human-alimentary-canal/103.html</p>

Syllabus ref	Learning objectives	Suggested teaching activities	Learning resources
II 6.3.4 (S)	2.6 <ul style="list-style-type: none"> Describe how fluoride reduces tooth decay and explain arguments for and against the addition of fluoride to public water supplies 	<p>Although most health professionals strongly support the addition of fluoride to water supplies, there are also some arguments against this.</p> <p>Student progress could be assessed using: May/June 2011 Paper 0610/32 question 5</p>	<p>Fluorides and fluoridation: www.ada.org/fluoride.aspx The American Dental Association's site dealing with the fluoride issue.</p>
II 6.3.5	2.7 Chemical Digestion <ul style="list-style-type: none"> State the significance of chemical digestion in the alimentary canal, in producing small, soluble molecules that can be absorbed State where, in the alimentary canal: <ul style="list-style-type: none"> amylase protease lipase enzymes are secreted State the functions of a typical: <ul style="list-style-type: none"> amylase protease lipase <p>listing the substrate and end products</p>	<p>This topic should be linked with earlier work on enzymes, in Unit 1.11.</p> <p>Students could draw a spider diagram of the alimentary canal. This can help them visualise from where the enzymes are secreted and where they act on specific substrates.</p> <p>The importance of optimum pH and temperature should be emphasized, as well as the importance of enzymes in the whole process of digestion.</p> <p>Student progress could be assessed using: May/June 2011 Paper 0610/22 question 9 May/June 2010 Paper 0610/22 question 8 Oct/Nov 2009 Paper 0610/02 question 4</p>	<p>Revision – Digestion and absorption: lgfl.skool.co.uk/content/keystage4/biology/pc/modules/digestion/digestion_part_2/index.html</p> <p>Video clip – Digestion: www.bbc.co.uk/learningzone/clips/digestion-of-carbohydrates-fats-and-proteins/105.html</p>
II 6.3.6	2.8 Absorption <ul style="list-style-type: none"> Define <i>absorption</i> as the movement of digested food molecules through the wall of the intestine into the blood or lymph Identify the small intestine as the region for absorption of digested food Describe the significance of villi in increasing the internal surface area of the small intestine 	<p>Core students do not need any detail of the villus structure but they need to understand that the dissolved substances, glucose and amino acids, are transported in the blood to the liver before they can be assimilated into the body.</p> <p>It helps the students to understand the importance of diffusion if the villus is compared with the alveoli in the lungs, Unit 4.4 The two structures can be compared as having a single cell membrane, good blood supply, moist surface area and a large surface area for efficient diffusion.</p>	<p><i>Biology for IGCSE</i>, Williams et al. Nelson Thornes 2009 p84–85</p>
II 6.3.6 (S)	2.8 <ul style="list-style-type: none"> Describe the structure of the villus, including the role of 	<p>The absorption of glucose should be linked with earlier work on active transport, in Unit 1.9.</p>	<p><i>Biology for IGCSE</i>, Williams et al. Nelson Thornes 2009 p84</p>

Syllabus ref	Learning objectives	Suggested teaching activities	Learning resources
	capillaries and lacteals <ul style="list-style-type: none"> State the role of the hepatic portal vein in the transport of absorbed food to the liver. Identify the role of the small intestine and colon in the absorption of water (the small intestine absorbs 5-10 dm³ per day, the colon 0.3-0.5dm³ per day) 	<p>Student progress could be assessed using: May/June 2011 Paper 0610/31 question 1 Oct/Nov 2009 Paper 0610/31 question 2</p>	
II 6.3.7	2.9 Assimilation <ul style="list-style-type: none"> Describe <i>assimilation</i> as movement of digested food molecules into the cells of the body where they are used, becoming part of the cells <ul style="list-style-type: none"> Describe the role of the liver in the: metabolism of glucose to glycogen Amino acids into proteins The destruction of excess amino acids. Describe the role of fat as an energy storage substance 	<p>For Core students, no detail of the hormonal control of glucose levels is required. They should, however, know that the liver stores excess glucose as glycogen (link back to Unit 2.2) and converts this back to glucose again if blood glucose levels fall.</p> <p>The conversion of excess amino acids to urea should be dealt with very simply; this will be covered again in Unit 5.4.</p> <p>Extension – the importance of the liver could be highlighted by looking at causes and effects of liver failure.</p> <p>Student progress could be assessed using: May/June 2008 Paper 0610/02 question 3</p>	Revision – Digestion: www.s-cool.co.uk/gcse/biology/nutrition/revise-it/digestion
II 6.3.7 (S)	2.9 <ul style="list-style-type: none"> Define deamination as removal of the nitrogen-containing part of amino acids to form urea followed by the release of energy from the remainder of the amino acid State that the liver is the site of breakdown of alcohol and other toxins 	<p>The importance of nitrogen in the body could be discussed in relation to DNA, hormones and enzymes.</p> <p>Student progress could be assessed using: May/June 2009 Paper 0610/31 question 2</p>	<i>Biology for IGCSE</i> , Williams et al. Nelson Thornes, 2009 p85
