Cor	e 1	mm, +
(a)	Mu	ch of the food we eat has to be digested.
	(i)	ch of the food we eat has to be digested.  Explain why food needs to be digested.
		[2]
	(ii)	Describe the part played by chewing in the process of digestion.
		······································
		[2]
(b)	(i)	Describe how food is moved along the oesophagus by peristalsis.
		[3]
	(ii)	Students sometimes wrongly suggest that food falls down into the stomach under the effect of gravity. Suggest <b>one</b> piece of evidence which would oppose this idea.
		[1]

(c) Fig. 1 shows the human digestive system.

[4]

(ii) State the nutrient on which protease enzymes act and name the products that are formed.

Nutrient	 	 

....[۷]

[Total : 14]

a protease, (D).

Table 1 shows information about the composition of a fruit.

Table 1

nutritional component	amount in 100 g of fruit
energy	162 kJ
protein	0.6 g
sugars	8.7 g
fats	trace
fibre	1.6 g
minerals	trace
vitamins	trace

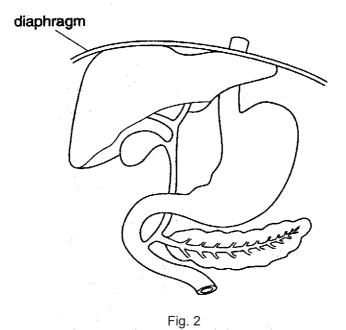

(a) (i) The average daily amount of protein needed by humans is 66 g. How many kilograms of this fruit would a person need to eat if this was the only source of protein? Show your working.

		Answerkg	[3]
	(ii)	List the <b>four</b> main chemical elements from which protein is made.	
		1	
		2	
		3	
		4	[2]
(b)	(i)	Describe how you could safely test this fruit to see if it contains reducing sugars.	
			••••
			.[3]
	(ii)	State what you would observe if a reducing sugar is present.	
			<b>[4]</b>

(ii) Name the vitamin which is associated with citrus fruits and green vegetables. State the function of this vitamin in the body.  Vitamin	(c)	Frui	t such as this is an important part of a healthy diet.
(ii) Name the vitamin which is associated with citrus fruits and green vegetables. State the function of this vitamin in the body.  Vitamin		(i)	Suggest one reason for eating food rich in fibre.
(ii) Name the vitamin which is associated with citrus fruits and green vegetables. State the function of this vitamin in the body.  Vitamin			
the function of this vitamin in the body.  Vitamin  Function			[1]
Function		(ii)	Name the vitamin which is associated with citrus fruits and green vegetables. State the function of this vitamin in the body.

# Fig. 2 shows part of the alimentary canal.

- (a) On Fig. 2 label each of the following structures:
  - (i) stomach;
  - (ii) liver;
  - (iii) pancreas.

(b)	Describe the parts played by the liver and the pancreas in the digestion of fats.							
	Liver							
	Pancreas							

[Total:7]

[3]

## **Alternative to Practical 1**

(a)	(i)	Describe how you would carry out a test to show the presence of fat in a biscuit. What observation would indicate the presence of fat?
		Test
		Observation
		[3]
	(ii)	Describe how you would use this test to compare the fat content of two different types of biscuit.
		[2]
(b)	Com	plete the equation below to summarise the process of fat digestion.
	fat +	water
		(enzyme)

[Total: 8]

Health workers in America were concerned about the diets of American people. In response a report was published called 'Dietary Goals'.

Fig. 3 compares an average 1977 diet with the report's recommended dietary goals.

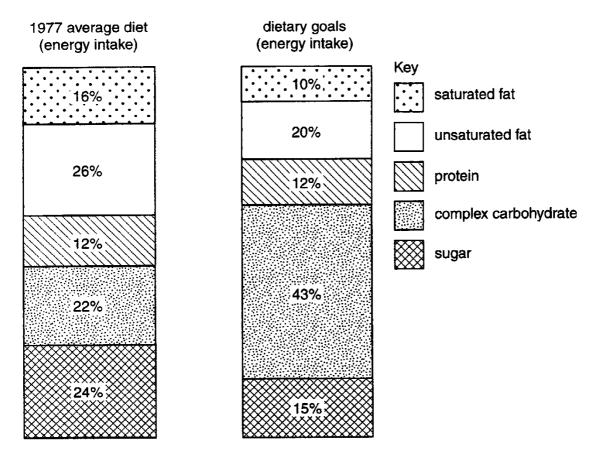

Fig. 3

(i)	What recommendations were made about changes to the fat content of the diet?
	[2]
(ii)	Suggest why these changes were recommended.
	[3]

(a)

(b)	Complex carbohydrates are long chain molecules.						
	Name a long chain carbohydrate present in						
	(i)	plant tissue;					
	(ii)	animal tissue.		[2]			
(c)	Sug	gest why a reduc	ction in the sugar content of the diet was recommended.				
	•••••						
		••••••		••••••			
				[2]			
It w	as als	so recommended	d that people should reduce their salt intake to about 3 g a da	ıy.			
(d)	Sug	gest why a high s	salt intake can be dangerous to health.				
		••••••	•••••••••••••••••••••••••••••••••••••••				
		•••••••••••		[1]			
			controlled diet to keep them healthy. Mothers are often advi				
(e)	Stat	e <b>three</b> advantaç	ges of feeding a baby with breast milk compared with formul	a milk.			
	1.	,					
	2.						
	3.	***************************************		[3]			
			тот	tal: 13]			

- (a) Describe the processes, beginning with nutrition, which result in the formation of proteins in the leaves of a photosynthetic plant. [8]
- (b) (i) Explain how amino acids in the small intestine of a mammal are assimilated into muscle tissue. [3]

(ii) Outline the role of proteins in animals. [4]

[Total: 15]

- a(i) to change food into simple / small / soluble form / molecules for absorption / diffusion(into intestine wall / villi) / carriage in blood
- (ii) any two of these

make small enough to swallow increase surface area of particles mix with saliva / enzyme / amylase

b(i) any three of these

contraction of (circular) muscles behind food / bolus relaxation of muscles in front occurs rhythmically / in waves food forced forward / along tube

(ii) any one of these

can swallow standing on head / hanging upside down can swallow in space with no gravity some mammals (standing on four legs) have horizontal oesophagus some mammals can regurgitate food against gravity

- c(i) A label to salivary gland / mouth / pancreas
  - B label to stomach
  - C label to pancreas
  - D label to stomach / pancreas / small intestine
- (ii) protein / named protein amino acids / polypeptides / peptides

- a(i) 66 / 0.6 = 110110 x 100 g fruit = 11 (kg)
- (ii) carbon, hydrogen, oxygen, nitrogen
- b(i) add to Benedict's solution / Fehling's reagent heat use of water bath / goggles / any other relevant safety practice
- (ii) colour change to orange (accept yellow / brick red/ red-brown)
- c(i) any one of these
  aids peristalsis / movement of food along gut(or alternative wording)
  prevents constipation(or alternative wording)
  reduces fat absorption / risk of bowel cancer(or alternative wording)
- (ii) any one of these
  vitamin C
  maintains healthy skin
  wounds heal more rapidly
  prevents scurvy
  assists uptake of iron

- a labels correctly placed
- b any four of these

liver production of bile / bile salts

emulsifies fats / increases surface area (alternative wording)

neutralises stomach acid / raises pH

#### pancreas

secretes lipase / enzyme digests / breaks down fats to fatty acids and glycerol

## **Alternative to Practical 1**

- a(i) emulsion test add ethanol / alcohol pour into water observation cloudiness / white / milky / emulsion
- (ii) equal quantities of biscuit / same conditions one comparison described e.g. of cloudiness
- b lipase / esterase fatty acids and glycerol

a(i) one mark for reduction / one mark for stating figures from

reduce fat / saturated fat / unsaturated fat

reduce fat content from 42% to 30% or by a quarter (or alternative wording)

reduce saturated fat from 16% to 10 % or by a third or by 6%(or alternative wording)

reduce unsaturated fat from 26% to 20% or by a fifth or by 6%(or alternative wording)

(ii) any one from

reference to problems of obesity (resulting from too much fat in the diet) reference to presence of cholesterol in (some) <u>saturated</u> fats can cause atherosclerosis / atheroma / blockage of <u>arteries</u>

reference to heart problems(or alternative wording)
reference to arthritis problems

b(i) starch / cellulose / hemicellulose / amylose / amylopectin / pectin / callose / insulin

Reject glycogen glycogen / chitin
Reject glucagon

- c(i) reference to dental decay(or alternative wording) reference to problems with obesity(or alternative wording) leading to heart disease / diabetes
- d reference to high blood pressure / greater risk of heart attack (or alternative wording)
- e any three of these

breast milk contains antibodies or greater protection from infection breast milk contains foodstuffs in correct proportions (or alternative wording)

bottle milk may contain bacteria or cause intestine disease (accept breast milk is sterile)

financial implications of bottle milk

some babies are allergic to cow's milk

reference to correct temperature of breast milk

reference to convenience of breast milk or preparation involved with bottle milk

no additives / preservatives in breast milk reference to bonding through breast feeding reference to triggering reduction in size of uterus

a(i) any eight of these

reference to absorption of nitrogen-containing salts by roots (accept reference to ions) by diffusion / active transport reference to nitrogen-fixing bacteria in root nodules nitrogen salts transported in xylem reference to photosynthesis

carbon dioxide is combined with / reacts with water using energy from (sun)light

reference to chloroplasts / chlorophyll

sugars produced

nitrogen is combined with sugars to make amino acids / proteins

b(i) amino acids pass through ileum wall / epithelium or lining or wall of villus absorbed into <u>blood</u> (stream) transported to muscles in <u>plasma</u> amino acids synthesized into proteins (or alternative wording)

(ii) any four of these

reference to growth / repair / formation of new cells reference to hormones reference to enzymes constituent of cell membranes(or alternative wording) reference to haemoglobin reference to collagen reference to keratin reference to antibodies reference to fibrinogen / fibrin
