BIOLOGY

Paper 2 Core October/November 2010

1 hour 15 minutes

0610/21

Candidates answer on the Question Paper.

No Additional Materials are required.

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams or graphs.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets  $[\ ]$  at the end of each question or part question.

| For Exam | For Examiner's Use |  |  |
|----------|--------------------|--|--|
| 1        |                    |  |  |
| 2        |                    |  |  |
| 3        |                    |  |  |
| 4        |                    |  |  |

[Total: 4]

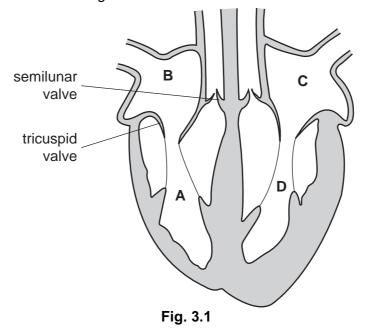

2 Fig. 2.1 shows a population growth graph for a herbivorous insect that has just entered a new habitat.

|     |      | Fig. 2.1   |     |
|-----|------|--|-----|
| (a) | (i)  | Which of the four phases, labelled ${\bf A},{\bf B},{\bf C}$ and ${\bf D},$ represents the stationary phase and which the lag phase? | se  |
|     |      | stationary phase   |     |
|     |      | lag phase [  | [2] |
|     | (ii) | During which phases will some of this insect population die?   |     |
|     |      | phases[  | [2] |
| (b) | (i)  | State two factors that could affect the rate of population growth during phase <b>C</b> .  |     |
|     |      | factor 1   |     |
|     |      | factor 2   | [2] |
|     | (ii) | Suggest how these two factors might change. Explain how each change wou affect the rate of population growth.                        | ld  |
|     |      | factor 1   |     |
|     |      |  |     |
|     |      |  |     |
|     |      | factor 2   |     |
|     |      |  |     |
|     |      |  | [4] |
|     |      | [Total: 1  | 0]  |

**3** Fig. 3.1 shows a section through the heart.

(a) (i) Name the chamber of the heart labelled **D**.

|      |   | [1] |
|------|---|-----|
| (ii) | State which of the chambers, <b>A</b> to <b>D</b> , contain deoxygenated blood. |     |
|      |   | [1] |

**(b)** The pulmonary blood vessels carry blood into and away from the heart.

Complete Table 3.1 to give three differences between the pulmonary artery and the pulmonary vein.

Table 3.1

|   | pulmonary artery | pulmonary vein |
|---|------------------|----------------|
| 1 |                  |                |
| 2 |                  |                |
| 3 |                  |                |

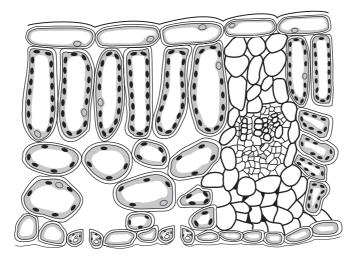

[3]

| (c) | (i)   | State the function of the valves within the heart.   |
|-----|-------|--|
|     |       | [1]  |
|     | (ii)  | Suggest what causes the tricuspid valve to open.   |
|     |       |  |
|     |       | [2]  |
|     | (iii) | Suggest why it is important that when the semilunar valves are open, the tricuspid and bicuspid valves are closed. |
|     |       |  |
|     |       |  |
|     |       | [2]  |
|     |       | [Total: 10]  |

**4** Fig. 4.1 shows a section through a leaf.

For Examiner's Use

[2]

# Fig. 4.1

| (a) | On    | Fig. 4.1, label a stoma, the cuticle and a vascular bundle.                                  |
|-----|-------|--|
|     | Use   | e label lines and the words 'stoma', 'cuticle' and 'vascular bundle' on Fig. 4.1. [3]        |
| (b) | (i)   | The upper layers of a leaf are transparent. Suggest an advantage to a plant of this feature. |
|     |       |  |
|     |       | [1]  |
|     | (ii)  | The cuticle is made of a waxy material. Suggest an advantage to a plant of this feature.     |
|     |       |  |
|     |       | [1]  |
|     | (iii) | State two functions of vascular bundles in leaves.   |
|     |       | 1  |
|     |       |  |
|     |       | 2  |
|     |       |  |

| (c) | Mo   | st photosynthesis in plants happens in leaves.        |
|-----|------|---|
|     | (i)  | Name the two raw materials needed for photosynthesis. |
|     |      | 1   |
|     |      | 2[2]  |
|     | (ii) | Photosynthesis produces glucose.                      |
|     |      | Describe how plants make use of this glucose.         |
|     |      |   |
|     |      |   |
|     |      |   |
|     |      |   |
|     |      | [3]   |
|     |      |   |

Fig. 8.1 shows a section through a pea flower.

| Fig. 8.1 |      |  |  |  |  |
|----------|------|--|--|--|--|
| (a)      | Naı  | ame the parts labelled <b>A</b> and <b>B</b> .   |  |  |  |
|          | Α    |  |  |  |  |
|          | В    | [2]  |  |  |  |
| (b)      | Thi  | s flower is insect-pollinated.   |  |  |  |
|          | (i)  | Define the term pollination.   |  |  |  |
|          |      |  |  |  |  |
|          |      | [2]  |  |  |  |
|          | (ii) | Suggest how parts <b>C</b> , <b>D</b> and <b>E</b> work together to bring about insect-pollination in this flower. |  |  |  |
|          |      |  |  |  |  |
|          |      |  |  |  |  |
|          |      |  |  |  |  |
|          |      | [3]  |  |  |  |

| (c)   | Suggest how a wind-pollinated flower would be different from the flower shown in Fig. 8.1. |  |  |
|---|--|--|--|
|   |  |  |  |
|   |  |  |  |
|   |  |  |  |
|   |  |  |  |
|   |  |  |  |
|   | [4]  |  |  |
| (d)   | After both pollination and fertilisation have happened, a flower produces seeds.           |  |  |
| These seeds can germinate and grow into new plants.   |  |  |  |
| For germination to happen a number of environmental factors must be including oxygen, a suitable temperature and water. |  |  |  |
|   | Explain why each of these three factors is essential for successful germination.           |  |  |
|   | oxygen   |  |  |
|   |  |  |  |
|   | suitable temperature   |  |  |
|   |  |  |  |
|   | water  |  |  |
|   | [3]  |  |  |
|   | [Total: 14]  |  |  |

| 9 | (a)   | The kidney is an excretory organ.   |   |   |  |  |
|---|---|---|---|---|--|--|
|   |   | Name two other excretory organs in humans and in each case state a substance that the organ excretes. |   |   |  |  |
|   |   | 1. organ  |   |   |  |  |
|   |   | substance excreted  |   |   |  |  |
|   |   | 2. organ  |   |   |  |  |
|   |   | substance excreted [4]  |   |   |  |  |
|   | (b) Table 9.1 shows the amounts of some substances in the blood in the renal artery and<br>in the renal vein of a healthy person. |   |   |   |  |  |
|   |   |   | Table 9.1   |   |  |  |
|   |   | substance   | amount in blood in renal<br>artery<br>(arbitrary units) | amount in blood in renal<br>vein<br>(arbitrary units) |  |  |
|   |   | oxygen  | 100.0   | 35.0  |  |  |
|   |   | glucose   | 10.0  | 9.7   |  |  |
|   |   | sodium salts  | 32.0  | 29.0  |  |  |
|   |   | urea  | 3.0   | 0.5   |  |  |
|   |   | water   | 180.0   | 178.0   |  |  |
|   | Suggest what happens in the kidney to bring about the differences in the composition of the blood shown in Table 9.1.             |   |   |   |  |  |
|   |   |   |   |   |  |  |
|   |   |   |   |   |  |  |
